ASD25
How to pass CSC3003S

Johan Bontes

Step 1: Nitpick first lecture

E.g.: ASD Lecture 1:

- "If you use AI to summarise lectures you will fail"
  Test 1 + Test 2 + exam
  - 3rd year is not high-school, you'll have to put in effort

- "ASD has been completely redesigned"
  - Studying previous lecture notes/exams/recaps does not help
  - ASD used to be much information systems (IS) content, now only CS
    - As per ACM standard curriculum

- "Tests will query understanding over memorisation"

Step 2: Effort is the algorithm

See veritasium: https://www.youtube.com/watch?v=0xS68sl2D70

Cannot absorb info through osmosis

- have to watch lectures (not a summary thereof)
- have to ~~understand~~ grok concepts
- ASD has few practice sessions; you have to practise/research yourself

CS != IS != real life

 *Words have two meanings* 

Many CS concepts are completely alien to normal life

- even though they reuse 'normal' words

If not covered in lectures, do not use it, e.g.:

- risk analysis: the three M's
  - I did not cover it
  - instruction: avoid the word *mitigate (it has too many conflicting overloads)*
  - ergo: the 3M's will not be tested

So nice they covered it twice

Repetition in lectures:

- High likelihood will be examined
  - If not in test1, then later

- Exams are designed to reward students who attend lectures or watch recordings thereof
  - The 'system' is designed to defeat use of AI !

- Lecturer sounds passionate => likely in exam
  - Everyone has their favourites

Tests/exams: Read like a lawyer

Q: "devise a risk strategy… and advise Boeing … [2]"

[2] = two sentences, not a long paragraph.

- risk strategy = jargon for A.R.T.A., not analysis, not management
- devise = short info why ARTA pick.
- No more than 1 line

- advise: based on ARTA risk: say in one line, Boeing do this.

Answer: "Prob.=H, Cost=H => Avoid, Boeing must not implement MCAS as designed". => Full points

Answer: Avoid, Boeing must tell airlines to retrain pilots
Borderline: if I mark full points, if tutor marks, likely 0.5+0.5

Tests/exams: Read like a lawyer

Q: "none use inheritance ... 4 out of 5 SOLID"

- no inheritance = no Liskov substitution !
- You now know answer is 3 out of SO_ID.
- If you list Liskov, -1 because you did not grok L in SOLID

Last question

- meant for best students
- needs the most time
- do not skip, because if test is too hard, score will be adjusted
- any points for last Q will be added to adjusted score
- free points !
- list anything that comes to mind, easy [1] or [2] points.

How to study?

- Attend lectures (most efficient use of time).
  - Watch lectures (not as good, but close)
    - To have same effectiveness needs rewatch
    - Do not play at 2x speed
    - Take notes of anything that you do not understand

- Make your own summary
  - The summary does not matter
  - It is the making thereof that runs the course through: short term mem => long term storage
    - Because reading is in different brain part from writing
    - Different part from summarising
    - Info must travel through many parts of brain, great for retention
